

HTML Advanced

About the Course

Designed for

This is a course with a high level of practical content, aimed at HTML users that wish to take their knowledge to the next level. It is designed for web content creators, publishers and developers as well as Internet related IT, sales and marketing personnel. This course aims to give you the skills you need to design, code and build a website through advanced HTML coding.

Teaching Approach

The teaching approach contains a mix of lectures, practical and one-to-one work and varies according to the people attending. Emphasis is placed upon quality of learning, rather than quantity.

Requirements

Previous experience of HTML is necessary to a basic level. Candidates should have a good understanding of computer basics and be familiar with the Windows operating system. A good familiarity with the Web / Internet is important.

Course Material

A large part of each course is spent with a set of specially prepared exercises and projects so that those attending gain firm foundations through their own practical experience. Professionally presented course notes are provided and these may be retained for reference afterwards.

Duration & Cost

This training program is one day in duration.
